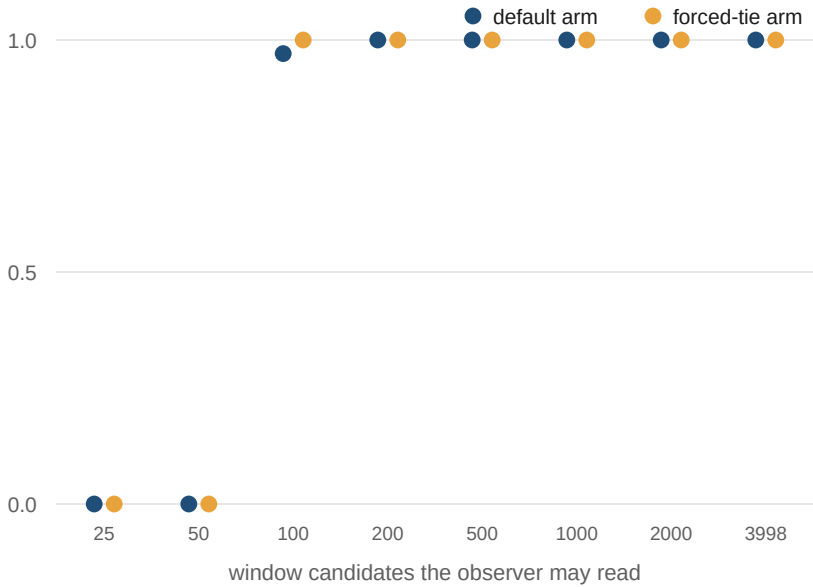
# The boundary of the instrument is measurable, and it is narrow

Left: share of structures whose ancestry resolved, against the window the observer may read.

### A. Lineage reachability vs window size



Reachability is a function of the window, not of the substrate: the substrate holds every relation.

### B. The window against the run (default arm)

everything before it is unrecoverable, because the organism does not retain it either

4,000 sleep events of 284,962 stored (2,374.68 per cycle)
