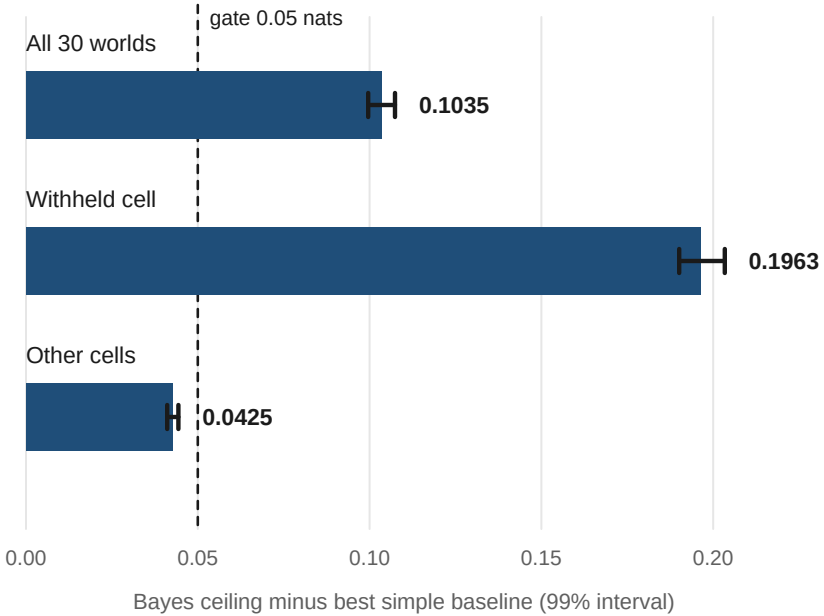
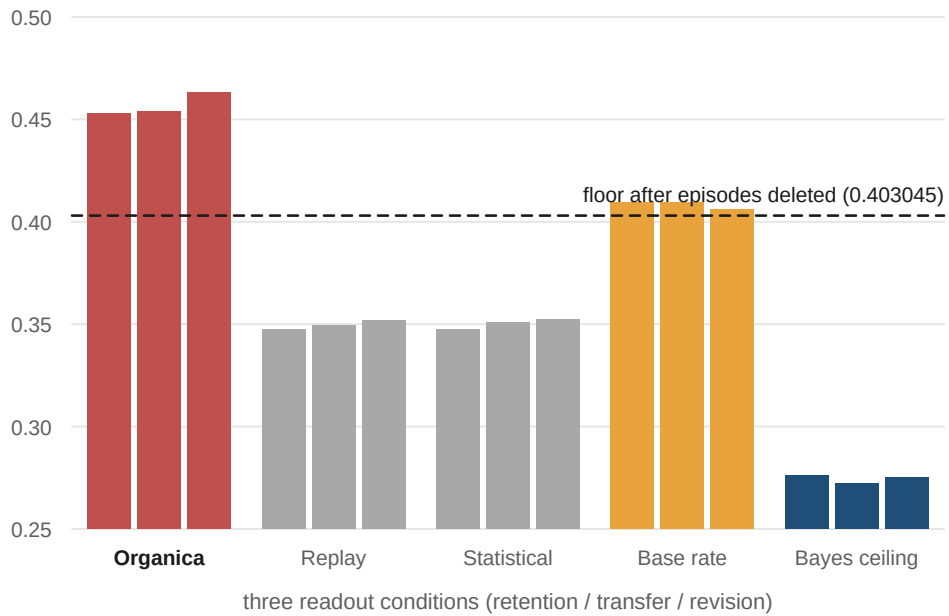
The benchmark was discriminative; the readout lost

Left: benchmark headroom in nats against the 0.05-nat gate. Right: the Pilot 0 readout by learner.

A. Benchmark headroom (nats)



B. Pilot 0 readout (log-loss)



Organica's readout is worse than the baselines' score after their episodes were deleted.

The transfer column is a diagnostic for Organica, not a measurement of transfer: the acquisition gate failed.
